

## **HIGH RISK OF FOREST FIRES**

### **Evacuation instructions – cleared by SDIS**

During this period, the authorities closely monitor the start of the fires for rapid interventions and warn us in case of risk for us.

Do not call the emergency numbers: 18, 112, 15, 17 as they are very busy and will alert us. (This does not apply for a fire starting within your sight).

#### **Who decides on the evacuation?**

It is the Prefect who decides and the authorities transmit the order to the manager.

It is the SCI that must then organize the evacuation.

**In the event of a fire starting on the domain, move away from the fire but wait for the evacuation order to allow quick access for the firefighters and the intervention of a water bomber helicopter.**

Staff and volunteers will wear yellow tops ( for guides) and orange (for supervisors).

**Consult the evacuation plan as soon as you arrive on the site, which allows for priority routes for firefighters.**

#### **What to do ?**

**Wait for the order which will be given by SMS and/or by loudspeaker.**

**Do not panic !**

**Strictly follow, without discussion, the instructions given by the guides to the exit where you will be directed.**

**At the assembly point (Lou Paradou) you will know which reception center to go to. You will have been given a car window sticker as you exit by the entrance roundabout and that will tell the CCFF guides where to direct you once on the CD 25.**

**People descending on foot meet at the Lou Paradou.**

Bring with you the following essentials as required: any medication, ID, some clothes and toiletries. Close windows, doors and shutters.

**Above all, do not close/shut of any connected gas bottles which supply your oven or hob inside (very high risk of explosion!). It becomes more of a risk if closed/shut off.**

Place the other bottles in a visible place on the plot.

**Above all, do not lock gates or remote-controlled gates at the entrance to your plot.**

**"Let us be collectively responsible for our safety in our haven"**
